

# Fisher™ 656 Diaphragm Actuator

The Fisher 656 actuator is a bracket-mounted, direct-acting, diaphragm actuator for either throttling or on-off service. Principal applications include operation of butterfly valves and built-in turbine valves, louvers, dampers, and other similar equipment.

## Features

- **Mounting Versatility**—Four tapped holes in the actuator base permit either bracket or plate mounting.
- **Long Actuator Travel**—Deep casings provide up to 105 mm (4.125 inches) of maximum travel with a size 60 actuator.
- **Application Versatility**—Wide spring selection is available for nearly any control application. Spring selection procedures are quick and accurate.
- **Severe Service Capability**—Rugged yoke and casings provide stability and corrosion resistant protection.

## Installation

The actuator may be installed in any position. Dimensions are shown in figure 1.

Fisher 656 Actuator

**Specifications**

**Maximum Recommended Casing Operating Pressure<sup>(1)</sup>**

2.4 bar (35 psig)

**Maximum Allowable Casing Pressure<sup>(2)(4)</sup>**

Actuator Size	Maximum Casing Pressure for Actuator Sizing <sup>(2a)</sup> , Bar (Psig)	Maximum Excess Diaphragm Pressure <sup>(1a)</sup> , Bar (Psig)	Maximum Diaphragm Casing Pressure <sup>(2a,3a)</sup> , Bar (Psig)
30	8.6 (125)	1.0 (15)	9.7 (140)
40	4.5 (65)	0.69 (10)	5.2 (75)
60	2.8 (40)	0.69 (10)	3.4 (50)

1a. Additional pressure may be added when the actuator is at full travel. If the Maximum Excess Diaphragm Pressure is exceeded, damage to the diaphragm or diaphragm casing might result. See the Maximum Pressure Limitation section.  
 2a. Maximum diaphragm casing pressure must not be exceeded and must not produce a force on the actuator stem greater than the maximum allowable actuator output thrust or the maximum allowable stem load. See the Maximum Pressure Limitation section.  
 3a. This maximum casing pressure is not to be used for normal operating pressure. Its purpose is to allow for typical regulator supply settings and/or relief valve tolerances.

**Net Stem Force Output**

See table 1

**Springs Commonly Used with Rotary Valves**

See table 2

**Maximum Travel**

ACTUATOR SIZE	MAXIMUM RATED STEM TRAVEL mm (INCHES)	
	Standard Travel Stop	Optional Travel Stop
30	54 (2.125)	Not available
40	89 (3.5)	76 (3)
60	105 (4.125)	97 (3.8125)

1. Control and stability may be impaired if this pressure is exceeded.  
 2. Exceeding this pressure can cause damage to the diaphragm, diaphragm casing, or other parts.  
 3. For fluid and temperature capabilities of optional materials, consult your [Emerson sales office](#) or Local Business Partner.  
 4. The pressure/temperature limits in this bulletin and any applicable standard or code limitation for valve should not be exceeded

**Operating Temperature Range<sup>(4)</sup>**

- -40 to 82°C (-40 to 180°F) with Nitrile Elastomer
- -40 to 149°C (-40 to 300°F) with Silicone Diaphragm

**Construction Materials**

Part Description	Construction Material
Diaphragm	Nitrile <sup>(3)</sup> (standard)
Diaphragm plate and yoke	Cast iron
Diaphragm casings, spring, spring seats, travel stop, stem, bearings, bearing seat, and bearing race	Steel
Adjustment screw	Brass

**Casing Pressure Connection**

1/4 NPT internal

**Mounting and Stem Thread Information**

See figure 1

**Actuator Weight**

Actuator Size	Approximate Shipping Weight, kg (Pounds)
30	23 (50)
40	32 (70)
60	73 (160)

**Options**

Top-mounted handwheel/adjustable travel stop

**Ordering Information**

When ordering, specify:

1. Actuator type and size
2. Spring range (see table 2)
3. Handwheel or optional travel stop
4. Loading pressure range and volume requirement

**Table 1. Stem Force Output and Other Actuator Data**

1. Others available; consult with your [Emerson sales office](#) or Local Business Partner for spring characteristics.  
2. For maximum rated stem travel with standard travel stop and zero handwheel limitation.  
3. Stem force equals initial spring compression with zero loading pressure.  
4. Stem force equals: (loading pressure X diaphragm area with stem fully extended) minus force of springs at maximum compression. Higher pressures can be used, but they must not exceed maximum allowable casing pressure or create stem force greater than safe load limit of any control device component.  
5. Part number stamped on spring.
