PGN-plus

Pneumatic · 2-Finger Parallel Gripper · Universal Gripper

Sizes 40 .. 380

Weight 0.08 kg .. 39.5 kg

Gripping force 123 N .. 21800 N

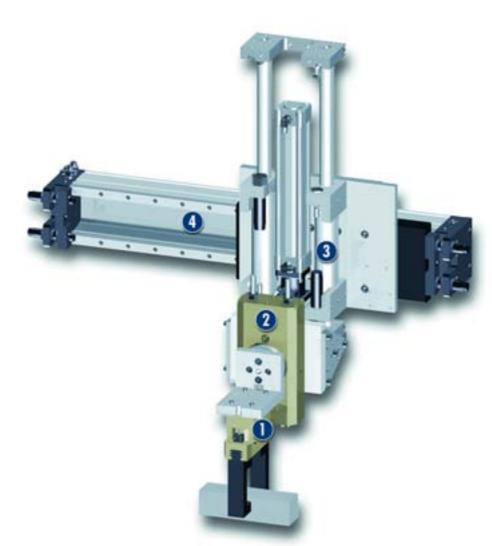

Stroke per finger 2.5 mm .. 45 mm

Workpiece weight 0.62 kg .. 80.5 kg

Application example

Insertion unit for light to medium-weight components

- PGN-plus 160 2-Finger Parallel
 Gripper with workpiece-specific
 gripper fingers
- SRU 63 Rotary Actuator
- SLE 50 K Short-stroke Module
- 4 SLF 03-P Gantry Axis

Universal Gripper

Universal 2-finger parallel gripper with large gripping force and high maximum moments thanks to multiple-tooth guide

Area of application

Ideal standard solution for numerous areas of application. For universal use in clean to slightly dirty environments, special versions available for dirty environments.

Your advantages and benefits

Robust multiple-tooth guidance

for precise handling

High maximum load capabilities possible

suitable for the use of long gripper fingers

Oval piston drive design

for maximum gripping forces

Mounting from two sides in three screw directions

for universal and flexible gripper assembly

Air supply via hose-free direct connection or screw connections

for the flexible supply of compressed air in all automation systems

Comprehensive sensor accessories

for diverse monitoring tasks and stroke position monitoring

Compact dimensions

for minimal interfering contours in handling

Diverse options

(dust protection, high temperature, anti-corrosion and many more) for optimization to suit precisely your requirements

General information on the series

Working principle

Wedge-hook kinematics

Housing material

Aluminum alloy, hard-anodized

Base jaw material

Steel

Actuation

Pneumatic, with filtered compressed air (10 μ m): Dry, lubricated or non-lubricated Pressure medium: Requirements on quality of the compressed air according to DIN ISO 8573-1: 6 4 4.

Warranty

24 months

Scope of delivery

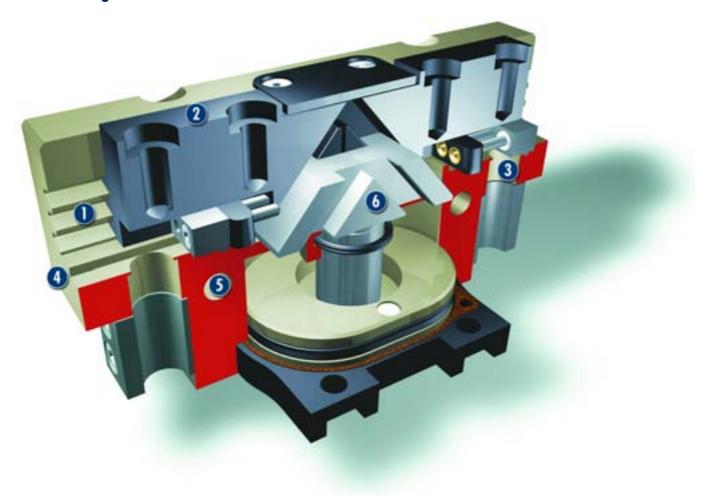

Brackets for proximity switches, guide centering sleeves, O-rings for direct connection, Assembly and Operating Manual with manufacturer's declaration

Gripping force safety device

with either mechanical gripping force safety device or SDV-P pressure maintenance valve

Sectional diagram

- Multiple-tooth guidance
 high load-bearing base jaw guide with
 minimum play for long fingers
- Base jaws
 for the connection of workpiece-specific
 gripper fingers
- Sensor system

 brackets for proximity switches and adjustable
 operating switch cams in the housing
- Housing

 weight-reduced through the use of a hardanodized, high-strength aluminum alloy
- Centering and mounting possibilities for universal gripper assembly
- Kinematics
 wedge-hook principle for high power
 transmission and synchronous gripping

Function description

The oval piston is moved up or down by means of compressed air. Through its angular active surfaces, the wedge hook transforms this motion into the lateral, synchronous gripping movement of both base jaws.

Options and special information

Version with dust cover

Absolutely sealed, increased degree of protection against the ingress of materials, for use in dusty environments

Anti-corrosion version

For use in corrosion-inducing atmospheres

High-temperature version

For use in hot environments

Version with increased grip force

When higher gripping forces are required

Accessories

Accessories from SCHUNK the suitable supplement for maximum functionality, reliability and performance of all automation modules.

Centering sleeves

Fittings

MMS magnetic switches

IN inductive proximity **switches**

V sensor distributors

FPS flexible position sensor

① For the exact size of the required accessories, availability of this size and the designation and ID, please refer to the additional views at the end of the size in question. You will find more detailed information on our accessory range in the "Accessories" catalog section.

General information on the series

Gripping force

is the arithmetic total of the gripping force applied to each jaw at distance P (see illustration), measured from the upper edge of the gripper.

Finger length

is measured from the upper edge of the gripper housing in the direction of the main

Repeat accuracy

is defined as the spread of the limit position after 100 consecutive strokes.

Workpiece weight

The recommended workpiece weight is calculated for a force-type connection with a coefficient of friction of 0.1 and a safety factor of 2 against slippage of the workpiece on acceleration due to gravity g. Considerably heavier workpiece weights are permitted with form-fit gripping.

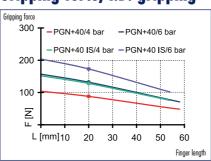

Closing and opening times

Closing and opening times are purely the times that the base jaws or fingers are in motion. Valve switching times, hose filling times or PLC reaction times are not included in the above times and must be taken into consideration when determining cycle times.

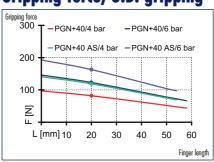

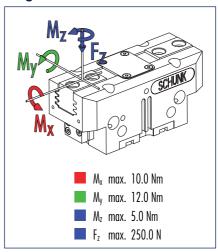

Gripping force, I.D. gripping

Gripping force, O.D. gripping

Finger load

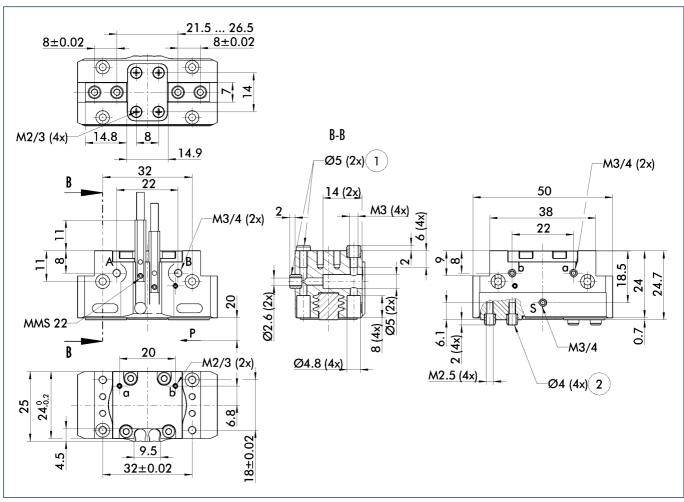

Moments and forces apply per base jaw and may occur simultaneously. M_V may arise in addition to the moment generated by the gripping force itself. If the max. permitted finger weight is exceeded, it is imperative to throttle the air pressure so that the jaw movement occurs without any hitting or bouncing. Service life may reduce.

Main views

The drawing shows the gripper in the basic version with closed jaws, the dimensions do not include the options described below.

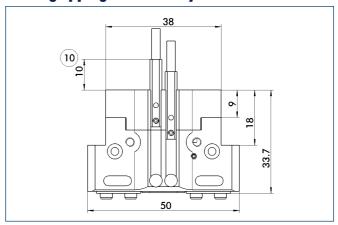

- (i) The SDV-P pressure maintenance valve can also be used (see "Accessories" catalog section) for I.D. or O.D. gripping as an alternative or in addition to the spring-loaded, mechanical gripping force safety device.
- A,a Main/direct connection, gripper opening
- B,b Main/direct connection, gripper closing
- S,s Air purge or ventilation hole
- 1) Gripper connection
- (2) Finger connection

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

AS/IS gripping force safety device

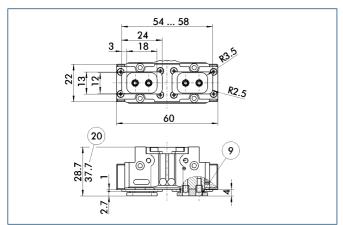

10) Projection only with AS version

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

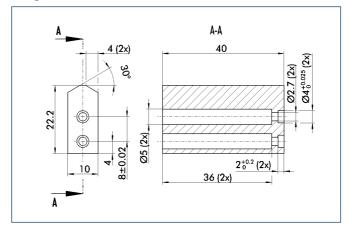

Version with dust cov

- (9) For screw connection diagram, see basic version
- 20 With AS / IS version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

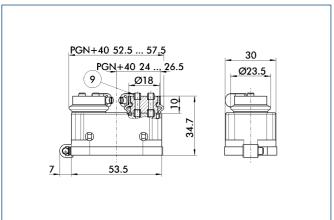

Finger blanks

Finger blanks for customized subsequent machining, incl. screw connection diagram

Designation	Material	Scope of delivery	ID
ABR-plus 40	Aluminum	1	0300008
SBR-plus 40	16 MnCr 5	1	0300018

HUE protective cover

(9) For screw connection diagram, see basic version

The HUE protective cover completely protects the gripper against external influences up to IP65 if an additional sealing of the cover bottom is provided as part of the application. The mounting diagram shifts by the height of the intermediate jaw.

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

AS/IS gripping force safety device

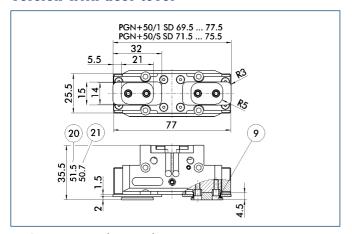

10) Projection only with AS version

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

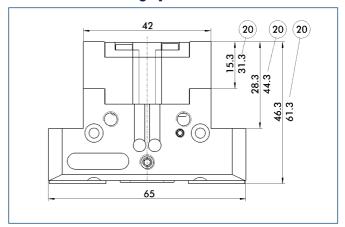

Version with dust cover

- 9 For screw connection diagram, see basic version
- 20 With AS / IS version
- (21) For KVZ version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

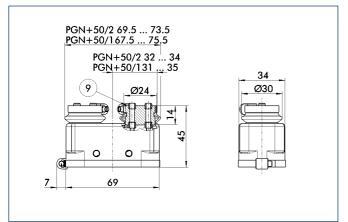

KVZ for increased grip force

20 With AS / IS version

The KVZ cylinder increases the gripping forces during opening and closing. A second, in series-connected piston also increases the force on the wedge hook. The full gripping force shown in the data table is sometimes only reached after a few hundred gripping cycles. Please consider that grippers which are equipped with a gripping force safety device (AS / IS) are higher

HUE protective cover

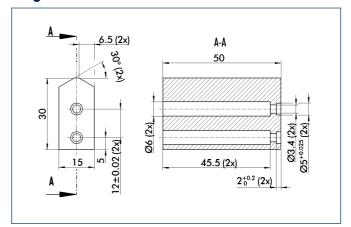

(9) For screw connection diagram, see basic version

The HUE protective cover completely protects the gripper against external influences up to IP65 if an additional sealing of the cover bottom is provided as part of the application. The mounting diagram shifts by the height of the intermediate jaw.

FMS force measuring jaws

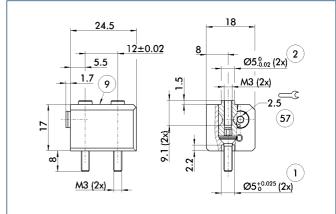

- (1) Gripper connection
- (2) Finger connection
- (17) Cable outlet
- 77) Active intermediate jaws
- 78 Passiv intermediate jaws

Force measuring jaws measure gripping forces, but can also determine workpiece weights or dimensional deviations. There are active and passive intermediate jaws (FMS-ZBA or FMS-ZBP). At least one active force measuring jaw is required per gripper, the rest can be passive. For each active jaw, an FMS-A1 control unit and an FMS-A connection cable are required.

- 20 With AS / IS version
- (21) For KVZ version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

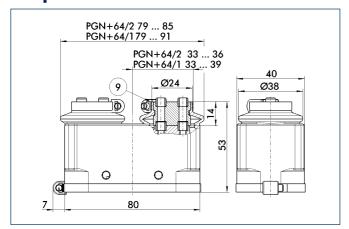

KVZ for increased grip force

20 With AS / IS version

The KVZ cylinder increases the gripping forces during opening and closing. A second, in series-connected piston also increases the force on the wedge hook. The full gripping force shown in the data table is sometimes only reached after a few hundred gripping cycles. Please consider that grippers which are equipped with a gripping force safety device (AS / IS) are higher

HUE protective cover

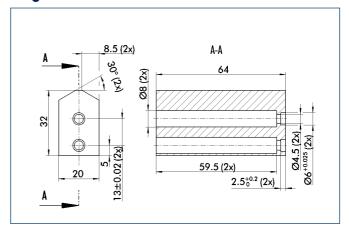

(9) For screw connection diagram, see basic version

The HUE protective cover completely protects the gripper against external influences up to IP65 if an additional sealing of the cover bottom is provided as part of the application. The mounting diagram shifts by the height of the intermediate jaw.

FMS force measuring jaws

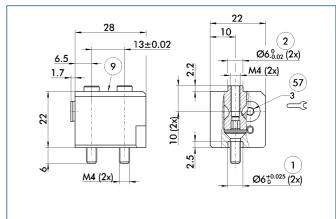

- (1) Gripper connection
- (2) Finger connection
- (17) Cable outlet
- 77) Active intermediate jaws
- 78) Passiv intermediate jaws

Force measuring jaws measure gripping forces, but can also determine workpiece weights or dimensional deviations. There are active and passive intermediate jaws (FMS-ZBA or FMS-ZBP). At least one active force measuring jaw is required per gripper, the rest can be passive. For each active jaw, an FMS-A1 control unit and an FMS-A connection cable are required.

APS-K0700	0302068	
APS-M1E	0302064	
APS-M1S	0302062	
AS-APS-M1-64/1	0302075	

(i) When using an APS system, a mounting kit (AS-APS, incl. 3 m cable), an APS sensor (APS-M1S) and electronics (APS-M1E) are required for each gripper. An extension cable (APS-K) can be connected between the sensor and the electronics as an option. The max. cable length between the sensor and the electronics is 10 m, between the electronics and their control unit (PLC) it is max. 1 m.

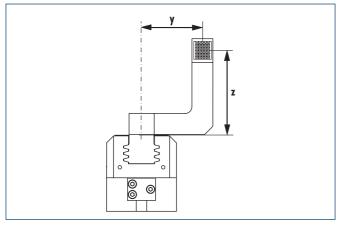

Measuring system:

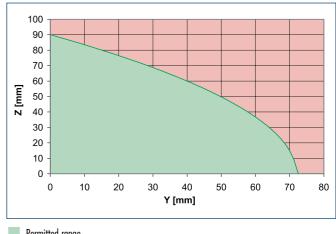

FPS Flexible position sensor

Description	ID	
AS-PGN/PZN-plus 64/1, PGN/PZN-plus 80/2	0301630	
FPS-F5	0301805	
FPS-F5 T	0301807	
FPS-S M8	0301704	

(i) When using an FPS system, an FPS sensor (FPS-S) and an control unit (FPS-F5 / F5 T or A5) are required for each gripper as well as a mounting kit (AS), if listed. Cable extensions (KV) are available as options in the "Accessories" catalog section.

Maximum permitted finger offset

Permitted range
Non-permissible range

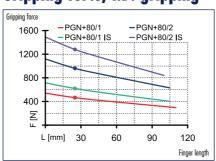

The curve applies to the basic version (stroke -1). For other versions, the curve will be parallel but offset in line with the max. permitted finger length.

You can find more detailed information and individual parts of the above-mentioned accessories in the "Accessories" catalog section.

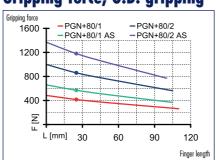

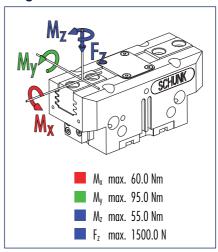

Gripping force, I.D. gripping

Gripping force, O.D. gripping

Finger load

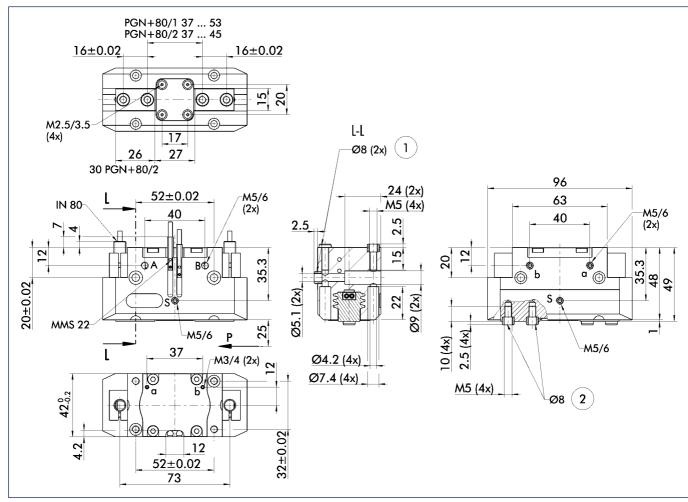

Moments and forces apply per base jaw and may occur simultaneously. M_V may arise in addition to the moment generated by the gripping force itself. If the max. permitted finger weight is exceeded, it is imperative to throttle the air pressure so that the jaw movement occurs without any hitting or bouncing. Service life may reduce.

Main views

The drawing shows the gripper in the basic version with closed jaws, the dimensions do not include the options described below.

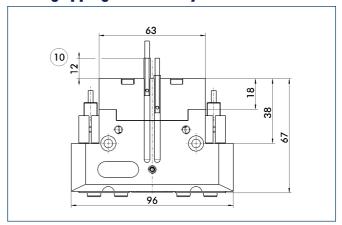

- (i) The SDV-P pressure maintenance valve can also be used (see "Accessories" catalog section) for I.D. or O.D. gripping as an alternative or in addition to the spring-loaded, mechanical gripping force safety device.
- A,a Main/direct connection, gripper opening
- B,b Main/direct connection, gripper closing
- S,s Air purge or ventilation hole
- 1) Gripper connection
- Finger connection

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

AS/IS gripping force safety device

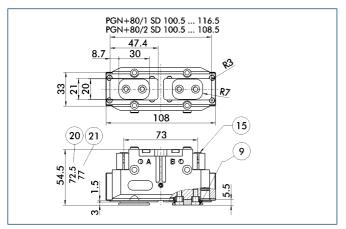

10) Projection only with AS version

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

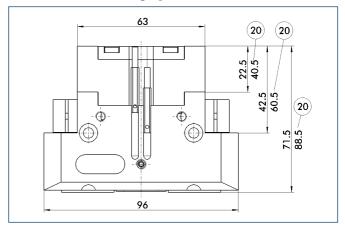

Version with dust cover

- (9) For screw connection diagram, see basic version
- 15 Sealing bolt
- 20 With AS / IS version
- (21) For KVZ version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

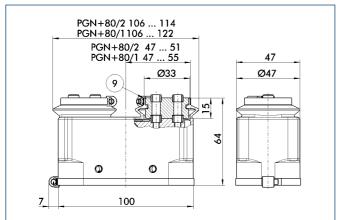

KVZ for increased grip force

20 With AS / IS version

The KVZ cylinder increases the gripping forces during opening and closing. A second, in series-connected piston also increases the force on the wedge hook. The full gripping force shown in the data table is sometimes only reached after a few hundred gripping cycles. Please consider that grippers which are equipped with a gripping force safety device (AS / IS) are higher

HUE protective cover

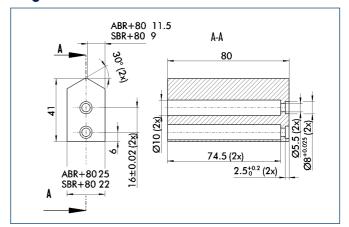

(9) For screw connection diagram, see basic version

The HUE protective cover completely protects the gripper against external influences up to IP65 if an additional sealing of the cover bottom is provided as part of the application. The mounting diagram shifts by the height of the intermediate jaw.

Sensor system

Measuring system:

APS Analog position sensor

Description	ID	
APS-K0200	0302066	
APS-K0700	0302068	
APS-M1E	0302064	
APS-M1S	0302062	
AS-APS-M1-100/1	0302079	
AS-APS-M1-100/2	0302080	

(i) When using an APS system, a mounting kit (AS-APS, incl. 3 m cable), an APS sensor (APS-M1S) and electronics (APS-M1E) are required for each gripper. An extension cable (APS-K) can be connected between the sensor and the electronics as an option. The max. cable length between the sensor and the electronics is 10 m, between the electronics and their control unit (PLC) it is max. 1 m.

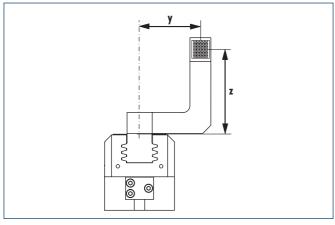

Measuring system:

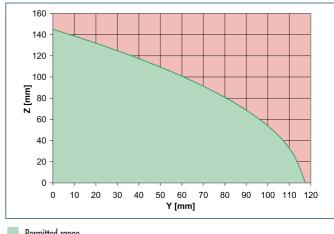

FPS Flexible position sensor

Description	ID
AS-PGN/PZN-plus 100/1	0301634
AS-PGN/PZN-plus 100/2, PZB 125	0301635
FPS-F5	0301805
FPS-F5 T	0301807
FPS-S M8	0301704

(i) When using an FPS system, an FPS sensor (FPS-S) and an control unit (FPS-F5 / F5 T or A5) are required for each gripper as well as a mounting kit (AS), if listed. Cable extensions (KV) are available as options in the "Accessories" catalog section.

Maximum permitted finger offset

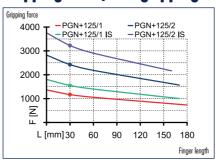

Permitted range
Non-permissible range

The curve applies to the basic version (stroke -1). For other versions, the curve will be parallel but offset in line with the max. permitted finger length.

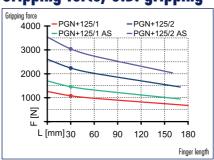

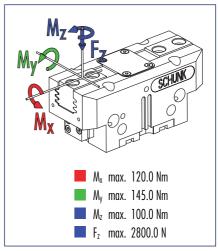

Gripping force, I.D. gripping

Gripping force, O.D. gripping

Finger load

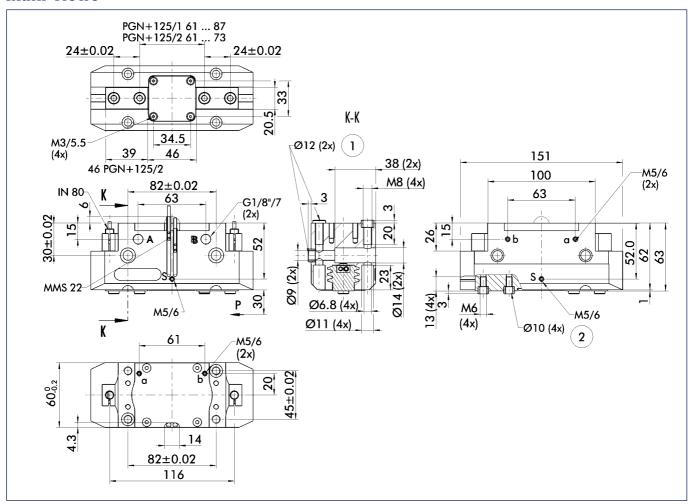

Moments and forces apply per base jaw and may occur simultaneously. M_V may arise in addition to the moment generated by the gripping force itself. If the max. permitted finger weight is exceeded, it is imperative to throttle the air pressure so that the jaw movement occurs without any hitting or bouncing. Service life may reduce.

Main views

The drawing shows the gripper in the basic version with closed jaws, the dimensions do not include the options described below.

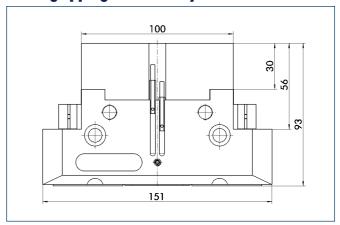

- (i) The SDV-P pressure maintenance valve can also be used (see "Accessories" catalog section) for I.D. or O.D. gripping as an alternative or in addition to the spring-loaded, mechanical gripping force safety device.
- A,a Main/direct connection, gripper opening
- B,b Main/direct connection, gripper closing
- S,s Air purge or ventilation hole
- 1) Gripper connection
- (2) Finger connection

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

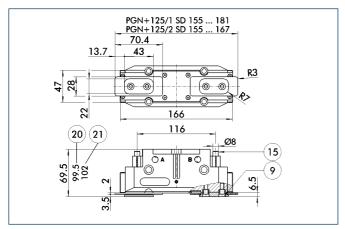

AS/IS gripping force safety device

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

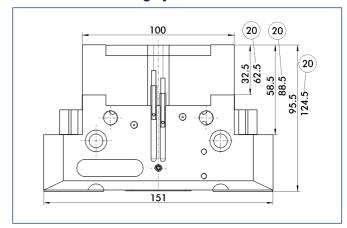

Version with dust cover

- (9) For screw connection diagram, see basic version
- 15) Sealing bolt
- 20 With AS / IS version
- (21) For KVZ version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

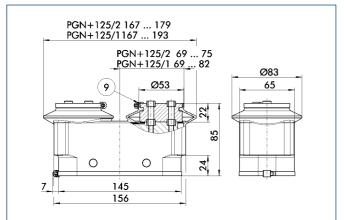

KVZ for increased grip force

20 With AS / IS version

The KVZ cylinder increases the gripping forces during opening and closing. A second, in series-connected piston also increases the force on the wedge hook. The full gripping force shown in the data table is sometimes only reached after a few hundred gripping cycles. Please consider that grippers which are equipped with a gripping force safety device (AS / IS) are higher

HUE protective cover

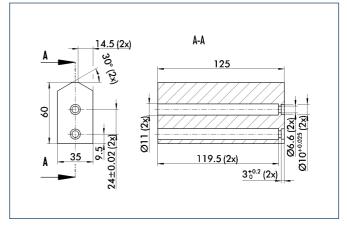

(9) For screw connection diagram, see basic version

The HUE protective cover completely protects the gripper against external influences up to IP65 if an additional sealing of the cover bottom is provided as part of the application. The mounting diagram shifts by the height of the intermediate jaw.

Sensor system

Measuring system: APS Analog position sensor

Description	ID	
APS-K0200	0302066	
APS-K0700	0302068	
APS-M1E	0302064	
APS-M1S	0302062	
AS-APS-M1-160/1 und 240/2	0302083	
AS-APS-M1-160/2	0302084	

(i) When using an APS system, a mounting kit (AS-APS, incl. 3 m cable), an APS sensor (APS-M1S) and electronics (APS-M1E) are required for each gripper. An extension cable (APS-K) can be connected between the sensor and the electronics as an option. The max. cable length between the sensor and the electronics is 10 m, between the electronics and their control unit (PLC) it is max. 1 m.

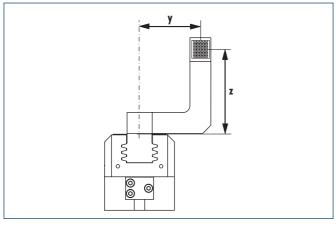

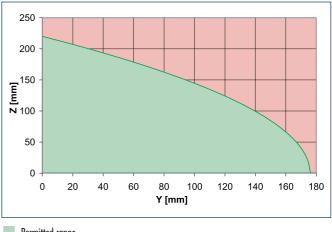

Measuring system: FPS Flexible position sensor

Description .	ID
AS-PGN/PZN-plus 160/1	0301638
AS-PGN/PZN-plus 160/2	0301639
FPS-F5	0301805
FPS-F5 T	0301807
FPS-S M8	0301704

(i) When using an FPS system, an FPS sensor (FPS-S) and an control unit (FPS-F5 / F5 T or A5) are required for each gripper as well as a mounting kit (AS), if listed. Cable extensions (KV) are available as options in the "Accessories" catalog section.

Maximum permitted finger offset

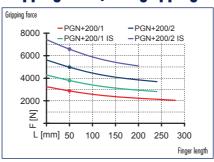

Permitted range
Non-permissible range

The curve applies to the basic version (stroke -1). For other versions, the curve will be parallel but offset in line with the max. permitted finger length.

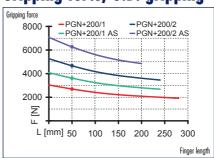

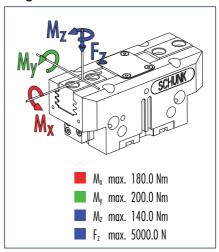

Gripping force, I.D. gripping

Gripping force, O.D. gripping

Finger load

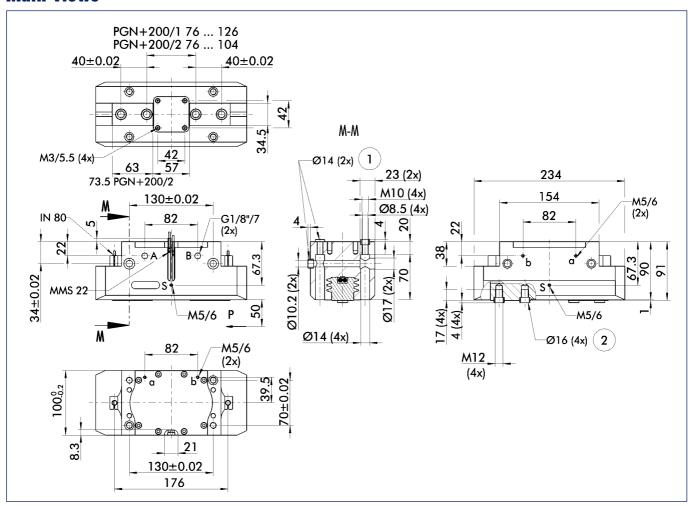

Moments and forces apply per base jaw and may occur simultaneously. M_V may arise in addition to the moment generated by the gripping force itself. If the max. permitted finger weight is exceeded, it is imperative to throttle the air pressure so that the jaw movement occurs without any hitting or bouncing. Service life may reduce.

Main views

The drawing shows the gripper in the basic version with closed jaws, the dimensions do not include the options described below.

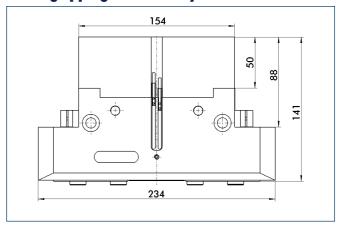

- (i) The SDV-P pressure maintenance valve can also be used (see "Accessories" catalog section) for I.D. or O.D. gripping as an alternative or in addition to the spring-loaded, mechanical gripping force safety device.
- A,a Main/direct connection, gripper opening
- B,b Main/direct connection, gripper closing
- S,s Air purge or ventilation hole
- 1) Gripper connection
- (2) Finger connection

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

AS/IS gripping force safety device

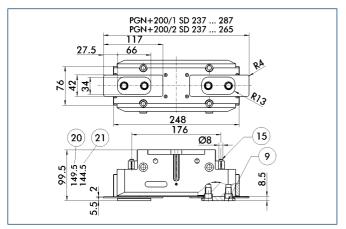

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

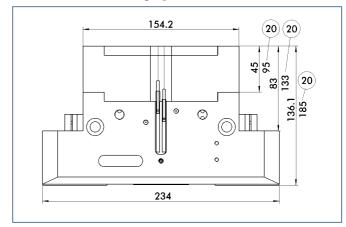

Version with dust cover

- (9) For screw connection diagram, see basic version
- 15 Sealing bolt
- 20 With AS / IS version
- (21) For KVZ version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

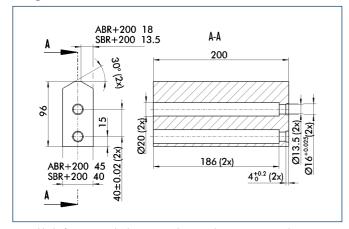

KVZ for increased grip force

20 With AS / IS version

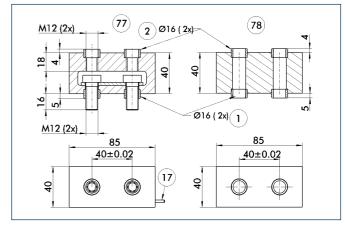

The KVZ cylinder increases the gripping forces during opening and closing. A second, in series-connected piston also increases the force on the wedge hook. The full gripping force shown in the data table is sometimes only reached after a few hundred gripping cycles. Please consider that grippers which are equipped with a gripping force safety device (AS / IS) are higher.

FMS force measuring jaws

- 1 Gripper connection
- (18) Fine serration
- (2) Finger connection
- (19) Air connection
- (17) Cable outlet

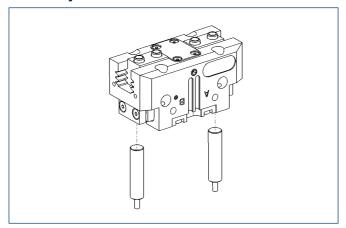

Force measuring jaws measure gripping forces, but can also determine workpiece weights or dimensional deviations. There are active and passive intermediate jaws (FMS-ZBA or FMS-ZBP). At least one active force measuring jaw is required per gripper, the rest can be passive. For each active jaw, an FMS-A1 control unit and an FMS-A connection cable are required.

Main views

The drawing shows the gripper in the basic version with closed jaws, the dimensions do not include the options described below.

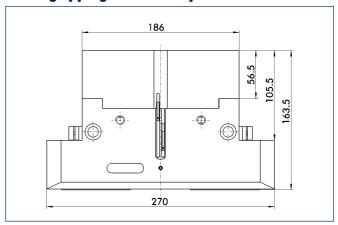

- (i) The SDV-P pressure maintenance valve can also be used (see "Accessories" catalog section) for I.D. or O.D. gripping as an alternative or in addition to the spring-loaded, mechanical gripping force safety device.
- A,a Main/direct connection, gripper opening
- B,b Main/direct connection, gripper closing
- S,s Air purge or ventilation hole
- 1) Gripper connection
- Finger connection

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

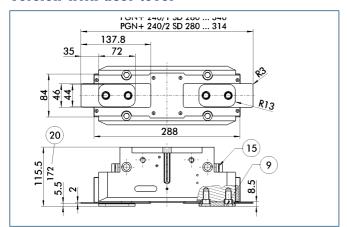

AS/IS gripping force safety device

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

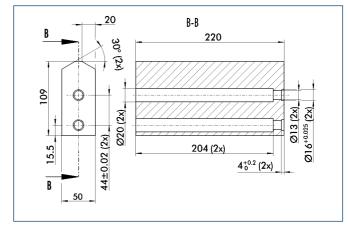

Version with dust cover

- (9) For screw connection diagram, see basic version
- (15) Sealing bolt
- 20 With AS / IS version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

AS-APS-M1-160/1 und 240/2	0302083	
AS-APS-M1-240/1	0302087	

(a) When using an APS system, a mounting kit (AS-APS, incl. 3 m cable), an APS sensor (APS-M1S) and electronics (APS-M1E) are required for each gripper. An extension cable (APS-K) can be connected between the sensor and the electronics as an option. The max. cable length between the sensor and the electronics is 10 m, between the electronics and their control unit (PLC) it is max. 1 m.

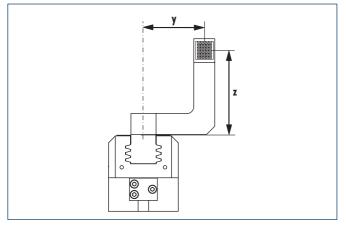

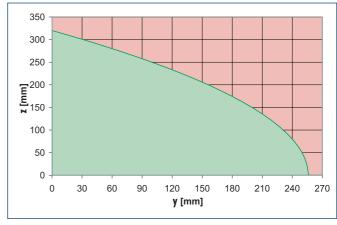

Measuring system: FPS Flexible position sensor

Description .	ID	
AS-PGN/PZN-plus 240/1	0301643	
AS-PGN/PZN-plus 240/2	0301644	
FPS-F5	0301805	
FPS-F5 T	0301807	
FPS-S M8	0301704	

When using an FPS system, an FPS sensor (FPS-S) and an control unit (FPS-F5 / F5 T or A5) are required for each gripper as well as a mounting kit (AS), if listed. Cable extensions (KV) are available as options in the "Accessories" catalog section.

Maximum permitted finger offset

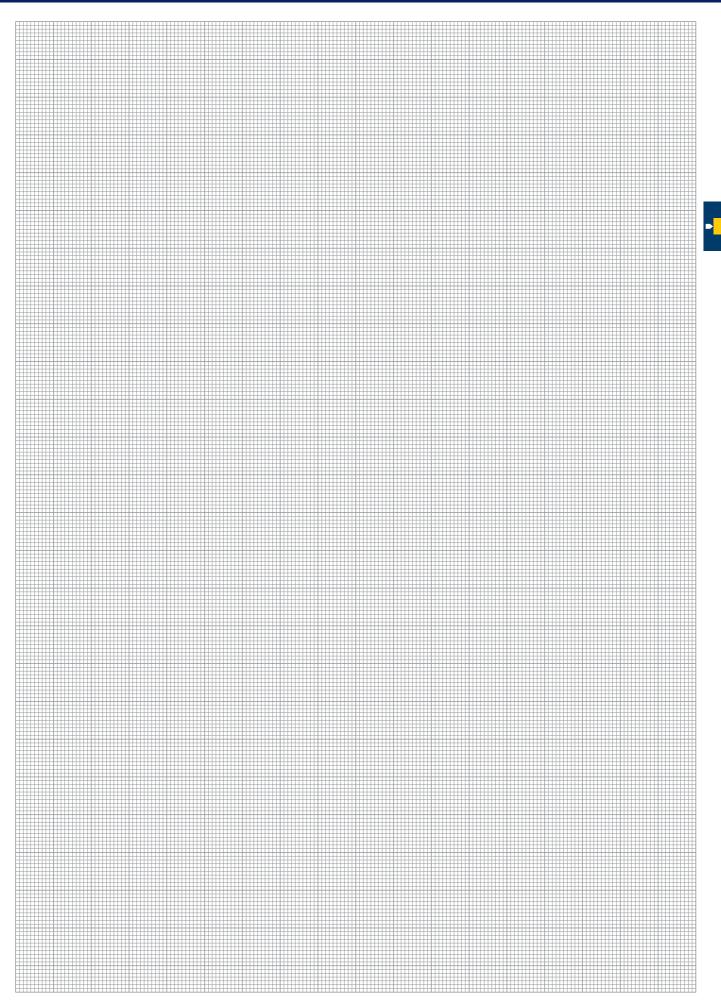

Permitted range
Non-permissible range

The curve applies to the basic version (stroke -1). For other versions, the curve will be parallel but offset in line with the max. permitted finger length.

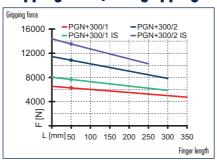

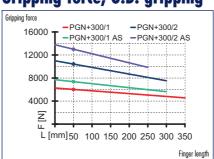

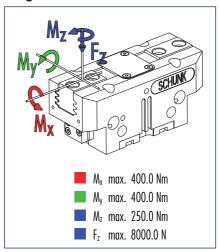

Gripping force, I.D. gripping

Gripping force, O.D. gripping

Finger load

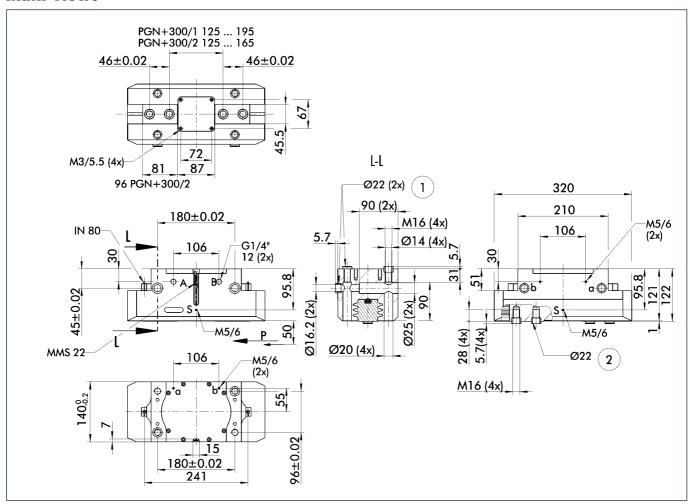

Moments and forces apply per base jaw and may occur simultaneously. M_V may arise in addition to the moment generated by the gripping force itself. If the max. permitted finger weight is exceeded, it is imperative to throttle the air pressure so that the jaw movement occurs without any hitting or bouncing. Service life may reduce.

Main views

The drawing shows the gripper in the basic version with closed jaws, the dimensions do not include the options described below.

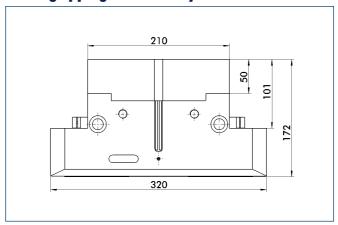

- (i) The SDV-P pressure maintenance valve can also be used (see "Accessories" catalog section) for I.D. or O.D. gripping as an alternative or in addition to the spring-loaded, mechanical gripping force safety device.
- A,a Main/direct connection, gripper opening
- B,b Main/direct connection, gripper closing
- S,s Air purge or ventilation hole
- 1) Gripper connection
- (2) Finger connection

Hose-free direct connection

The direct connection is used for supplying compressed air to the gripper without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

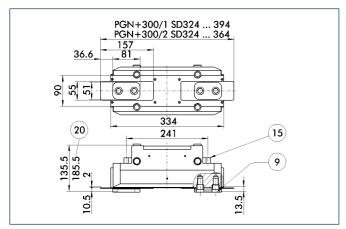

AS/IS gripping force safety device

The mechanical gripping force safety device ensures a minimum gripping force even if there is a drop in pressure. This acts as closing force in the AS version, and as opening force in the IS version. In addition, the gripping force safety device can also be employed as a gripping force booster or for single-acting gripping.

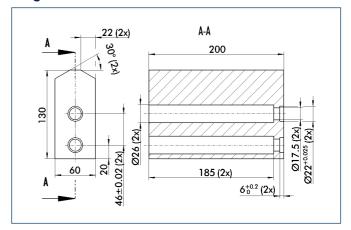

Version with dust cover

- (9) For screw connection diagram, see basic version
- (15) Sealing bolt
- 20 With AS / IS version

The "dust-protection" option increases the degree of protection against penetrating substances. The screw connection diagram shifts by the height of the intermediate jaw. The finger length is still measured from the upper edge of the gripper housing.

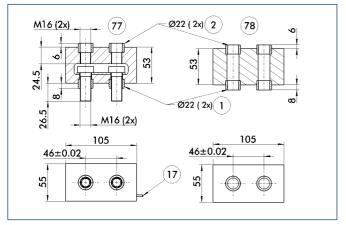

Finger blanks

Finger blanks for customized subsequent machining, incl. screw connection diagram

FMS force measuring jaws

- (1) Gripper connection
- (77) Active intermediate jaws
- (2) Finger connection
- 78 Passiv intermediate jaws
- (17) Cable outlet

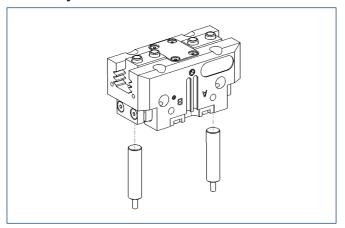

Force measuring jaws measure gripping forces, but can also determine workpiece weights or dimensional deviations. There are active and passive intermediate jaws (FMS-ZBA or FMS-ZBP). At least one active force measuring jaw is required per gripper, the rest can be passive. For each active jaw, an FMS-A1 control unit and an FMS-A connection cable are required.
