

Description: Parker A-LOK® Instrumentation tube fittings are designed as leak-free connections for process, power and instrumentation applications.

Material: 316 stainless steel (standard) other material available on request.

Parker Instrumentation Tube Fittings are supplied complete and ready to use. The ferrule(s) swage onto the tube as it moves down the body seat creating a pressure/vacuum-tight seal on both tube and body by the interface pressure and surface finish or matting components. The Parker Suparcase® ferrule (back-ferrule only on A-LOK®) creates a strong mechanical hold on the tube.
